

Real Results: Regional 7 Hospital Health System

45% EFFICIENCY INCREASE

2500+ bed health system achieving full AI transformation in just 18 months

The AI Transformation Journey

45+ %

Efficiency Gains

15,000 hours saved per year

Streamlined operations across 7 major workflows, reducing manual touchpoints and accelerating processing time.

\$3.2M

Cost Reduction

30+ roles automated

Direct reduction in operational overhead and labor costs through autonomous agent deployment. 25-30% RCM workforce optimization.

300+ %

ROI Achieved

10+ day DSO Improvement

Significant return on investment realized within the first 18 months of phased implementation.

iCAN™ SOLUTION DEPLOYED

- Autonomous agents for cash posting, correspondence, and credit balancing
 - Epic integration for test patient creation and workforce compliance

- Lab orders automation with proprietary Zombie Claims™ recovery
 - Real-time dashboards replacing static monthly reporting

"What used to take a team of 30+ across seven workflows now runs with precision and speed -- freeing our people to focus on what automation can't do: complex problem-solving and patient care."

About the Client

A regional 7-hospital health system with 2,500+ beds, managing complex revenue cycle operations across multiple facilities, EMR platforms, and financial institutions. The organization sought to transform manual, spreadsheet-dependent workflows into an AI-powered operation.

Key Takeaways

- Phased rollout across 18 months de-risked the transformation
- 7 major workflows automated with iCAN™ autonomous agents
- Human-in-the-loop design preserved expert judgment for exceptions
- 300+ % ROI validates the business case for AI-powered RCM
