THE CHALLENGE

- **Multi-bank complexity**
Banking operations across multiple financial institutions with fragmented processes
- **Manual spreadsheet dependency**
RCM processes reliant on error-prone Excel workflows with no real-time visibility
- **Three separate EMR systems**
Siloed data across disparate platforms making reconciliation nearly impossible
- **Staffing inefficiency**
Team of 12 stretched across repetitive, low-value tasks with high error rates
- **Complex reconciliation**
Credit balances, payer adjustments, recoupments, refunds, and patient payments

THE SOLUTION

- **iCAN™ Multi-Agent Architecture**
Purpose-built AI platform for healthcare revenue cycle with specialized autonomous agents
- **Autonomous AI Agents**
Dedicated agents for payment posting, reconciliation, denial management, and follow-up
- **Unified Data Layer**
Single source of truth integrating all three EMR systems into one cohesive workflow
- **Human-in-the-Loop Design**
Expert oversight for complex exceptions — AI handles the volume, people handle the judgment
- **Real-Time Dashboards**
Actionable, live analytics replacing static monthly reports

MEASURABLE IMPACT

95% Automation

Achieved in under 3 months

3x Productivity

Team of 4 outperforms former team of 12

45%+ Collections Growth

Improved accuracy & faster follow-up

100% EMR Integration

Seamless across all three platforms

Real-Time Visibility

Monthly reports replaced with live dashboards

High-Value Focus

Team refocused on exception handling

"iCAN™ didn't just automate our processes -- it fundamentally changed how we think about revenue cycle management. Prevention replaced reaction as our operating principle."
